Art Unit: 1792

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5 and 7-11, drawn to a discharging solution for forming patterns.

Group II, claim(s) 12-17 and 19-23, drawn to a method of using the composition of Group I.

Group III, claim(s) 24 and 25, drawn to a method for producing a patterned electronic device.

Group IV, claim(s) 26 and 27, drawn to a patterned electronic device.

1. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of Group IV's organic molecules having fluoroalkyl chains, does not have all the limitations of the composition of Group I; further, the article of Group IV does not require all the limitations of the method of its production in Group III (the surface tension of the discharging solution). The special technical feature of claim 12, Group II, is that method of forming patterns is by an ink-jet process, while the composition of claim 1, Group I, is not disclosed as ink-jet usable; therefore, the special technical feature of Group II is not found throughout.

Forming a pattern with solution comprising organic molecules having fluoroalkyl chains is known in the art. Masahiro Furusawa et al (2002/114887) teaches a method of making pattern structure by discharging an ink comprising fluoroalkyl chains where is comprising alkoxy group on a surface, such as fluoroalkylalkoxysilane with an ink jet method. It further teaches after depositing the solution containing organic molecules (fluoroalkylalkoxysilane), depositing another solution containing metal precursor (trimethylaluminum) by ink jet printer on the surface to make the second pattern area. However the trimethylaluminum solution does not contain the same solution of the first

Art Unit: 1792

pattern layer (fluoroalkylalkoxysilane). Y. Yokoyama et al (2003/0224152152) teaches a method of making aluminum pattern by ink jet printing, comprises trimethylaluminum and a surface tension modifier (surfactant) having fluoroalkyl group and P. Jenkner et al (6255516) teaches fluoroalkylalkoxysilane is a surfactant.

- 1. If any of the above Group is elected, a further election of species is also required
- 2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

 3.

The species are as follows:

wherein the second pattern forming material is metal alkoxide, metal acetylacetonate, metal carboxylate, metal inorganic compound (If applicant chooses any of these, applicant must further choose that the metal is silicon, titanium, zirconium, aluminum, copper, lead, indium, tin, zinc, yttrium, barium, nickel, or iron),a colloid of gold, silver, palladium, platinum, copper, polythiophene, polypyrrole, polyaniline, polyalkylthiophene, poly-9,9'dialkyl-fluorene-co-bithiophene, or a polymer obtained by doping one of polyacetylene, polyphenylene, polypyrrole, polythiophene, polyquinoline, polypyridine, polyaniline, polyparaphenylene, polyparaphenylene vinylene, polythiophene vinylene, polythiophene vinylene, polythiophene, polyfluorene, or polyacene.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1-2, 7, 8, 10-14, 19, 22-24, and 27.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the method of making the second pattern material in Claim 1 have nothing disclosed that is required to be in common between them other than the production pattern structure, which as discussed above are known.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

1. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Application/Control Number: 10/552,796

Art Unit: 1792

2. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

Page 5

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tabassom Tadayyon-Eslami whose telephone number is 571-270-1885. The examiner can normally be reached on 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Cleveland can be reached on 571-272-1418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
